The meRNA was isolated from roots of Glycine max"
/Supernod' plants generously donated by Dr. Gary Stacey.
The seedlings were innoculated with Bradyrhizobium
japonicus, strain USDA110 priot to harvest. Stratagene's
cDNA synthesis Kit (catalog number 200401) was used to
synthesize the cDNA. First-strand synthesis was performed
with 5-methyl dCTP, hence the ligated cDNA was
hemimethylated. A modification of Stratagene's
first-strand synthesis primer was used. An 'anchor'
nucleotide (V=A,C, or G) was added to the 3' end of the
primer at the 5' end of the poly(A) tract. After
second-strand synthesis, the cDNA ends were filled in with
cloned Pfu DNA polymerase, ligated to EcoRI adapters and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /clone="GENOME SYSTEMS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        subsequently phosphorylated. The XhoI site within the first-strand synthesis primer was then restricted by digestion with XhoI; all XhoI sites in the CDNA would be protected by their hemimethylated status. The CDNA constructs were size-fractionated with a 500bp cutoff, using GibcoBRI Life Technologies' cDNA Size Fractionation column. The column eluent was then ligated into Stratagene's pBluescript II XR Predigested vector (pBluescript II SK(+) that has been digested with EcoRI and XhoI, and phosporylated by Stratagene). Both the white and blue colonies appear to contain recombinant plasmids with cDNA inserts, based on size (n=25). This library was constructed by Dr. Paul Keim and Dr. Virginia Coryell."

//note="vector: pspORT1; Site 1: Sal1; Site 2: Not1; This /note="vector: pspORT1; Site 1: Sal1; Site 2: Not1; This cDNA library was constructed from mRNA isolated from seed coats (100-200mgs) of greenhouse grown plants. The library was prepared using the Life Technologies psuperscript cDNA library construction kit. Complimentary DNA was synthesized from mRNA using a poly (dT) sequence with a Not I restrictions site. Sal I linkers adapers were ligated to the blunt-ended cDNA fragments followed by Not I digestion. The cDNA fragments were directionally cloned into the Not I-Sal I restriction site of the psPORT1 vector. The ligated cDNA fragments were psPORT1 vector. The ligated cDNA fragments cells. This library was constructed by Dr. Lila Vodkin and Dr. Anu Khanna."

                       /note="Vector: pBluescript II SK+; Site 1: EcoRI; Site_2: XhoI; The cDNA library was constructed from floral meristematic mRNA provided by Dr. Halina Knap of Clemson University. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with a xhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into DHIOB host cells (GibcoRRL). This library was constructed in the
cells (GibcoBRL). This library was laboratory of Dr. Randy Shoemaker."

```

linker-primer. EcoRI adopters were ligated to the blunt-ended cDNA fragments and the products were digested with XhoI for directional cloning into lambda ZAP Express vector. This lambda library was amplified once using E. coli host strain XLI Blue MRF'. Inserts were then subcloned by mass excision using ExAssist helper phage for conversion into phagemid vector pBK-CMV in E. coli host strain XLOLR."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  germinating seedlings, shoot tips, or leaves exposed to various stresses (source libraries Gm-c1064, Gm-c1065, Gm-c1066, and Gm-c1067) and Gm-c1068); and 963 cDNAs from young leaves exposed to bacterial and fungal pathogens (source libraries Gm-c1072, Gm-c1073, and Gm-c1074). The 5'ESTs of the source clones from the different libraries was used to select singletons, or a representative of each contig, which were reracked to form library Gm-r1088 and the cDNA clones of the reracked Gm-r1081 library were then sequenced at the 3'end. The uniquene selection and 3's sequencing was funded by NSF Plant Genome project #9872565 (http://soybeangenomics.cropsci.uiuc.edu/) as part of creation of a low redundancy soybean cDNA set. The source cDNA libraries were constructed by the laboratories of Lila Vodkin, University of Illinois, Randy Shoemaker, Iowa State University, and Paul Keim, Northern Arizona University as part of the Public EST project, http://129.1166.26.94/soybeanest.htmll. The contig analysis to select unique genes was performed by the laboratory of Ernest Retzel, Center for Computational Genomics and Bioinformatics, University of Minnesoca, http://web.aho.umm.edu/biodata/nsfsoy/. Reracking and 3's sequencing were conducted by services of the University of Illinois Keck Center for Computative and Functional Genomics http://web.aboutech.uiuc.edu/keck.htm. Note: The corresponding 5' EST from each clone in the Gm-r1088 library is listed in the 'OTHER EST' find each clone can also be obtained by referring to the Genome Systems clone ID of the original cDNA library that is also listed under 'OTHER EST'."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1-vodkin@uiuc.edu

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DB DB

The invention relates to a nucleic acid fragment encoding a soybean myo-inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate synthase having a decreased capacity for the synthesis of myo-inositol 1-

Claim 9; SEQ ID NO 12; 48pp; English.

New nucleic acid fragment encoding myo-inositol 1-phosphate synthase, useful for producing plants with decreased raffinose, stachyose, and produce and increased sucrose, leading to valuable and useful soybean

The cc nucleic acid fragment and methods are useful for producing plants with decreased raffinose, stachyose and phytic acid content and increased cs sucrose and inorganic phosphate content, leading to valuable and useful soybean products. This sequence represents a mutant soybean myo-inositol 1-phosphate synthase polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ភិទិតិ សិក្សា ស

The invention relates to an isolated nucleic acid fragment encoding a soybean myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-phosphate synthase having decreasing capacity for the synthase for myo-inositol-1-phosphate. Also included are a chimeric gene (comprising the complement, subfragment or the complement of the synthase, its complement, subfragment or the complement of the subfragment, operably complement, subfragment or the complement of the subfragment, operably complement of the synthase, its comprising the chimeric gene (comprising the chimeric gene encoding a soybean myo-inositol 1-phosphate synthase), a soybean plant comprising the chimeric gene (with a heritable phenotype of a seed phytic caid content of less than 17 micromol/g, a seed content of raffinose plus stachyose of less than 14.5 micromol/g, and a seed sucrose content of creater than 200 micromol/g, provided that the plant is not LR33), seeds (comprising crossing LR33 or the plant comprising the chimeric gene with an elite soybean plant and selecting a progeny plant of the cross sof crom the plant made by the above method, a soy protein product derived from seeds of a soybean plant (homozygous for one or more gene encoding a sybean product derived from seeds of a soybean plant with the gene confers a compression product derived from seeds of a soybean plant with the plant concentration and useful concentration product derived from seeds of a soybean plant with the presence and is useful for altering raffinose as mentioned above. The nucleic acid is useful for concentration of raffinose oligosaccharides in soy plants (and other legumes) can lead to flatulence when consumed by humans. The present sequence represents a mutant myoning the concentration of raffinose oligosaccharides in soy plants (and other legumes) can lead to flatulence when consumed by humans. The present sequence represents a mutant myoning the concentration of raffinose oligosaccharides in soy plants (and other le

CC inositiol 1-phosphate synthase or a mutant myo-inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate composition also relates to a chimeric gene operably linked CC phosphate. The invention also relates to a chimeric gene operably linked CC processing a soybean myo-inositol 1-phosphate synthase, a soybean plant comprising the chimeric gene, a method of making the soybean plant, a soy protein product derived from the CC processing of soybean seeds, a method of making the soybean plant, a cc seed of the soybean seeds, a method of making or producing a soy protein product and a method of using a soybean plant as oy coresin product and a method of using a soybean plant compositol 1-phosphate synthase having cereased capacity for the synthesis of myo-inositol 1-phosphate. The concleic acid fragment and methods are useful for producing plants with concleic acid fragment and methods are useful content and increased concleic acid fragment synthase and phytic acid content and increased concleic acid fragment stachyose and phytic acid content and increased concleic. This sequence represents a mutant soybean myo-inositol concluded synthase polypeptide of the invention.
Sequence 510
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        invention relates to a nucleic acid fragment encoding a soybean myo-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8; SEQ

                                                                                                                                                                                                                                                                                                                                                                                                    results in a decrease in expression of an endogenous or native gene encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant comprising the chimeric gene, a method of making the soybean plant, a seed of the soybean plant, a soy protein product derived from the processing of soybean seeds, a method of making or producing a soy protein product and a method of using a soybean plant homozygous for at least one gene encoding a mutant myo-inositol 1-phosphate synthase having decreased capacity for the synthasis of myo-inositol 1-phosphate. The nucleic acid fragment and methods are useful for producing plants with decreased raffinose, stachyose and phytic acid content and increased sucrose and inorganic phosphate content, leading to valuable and useful soybean products. This sequence represents a wild type soybean myo-inositol 1-phosphate synthase polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a nucleic acid fragment encoding a soybean myo-inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate synthase or a control of myo-inositol 1-phosphate adcreased capacity for the synthesis of myo-inositol 1-phosphate. The invention also relates to a chimeric gene operably linked to suitable regulatory sequences, where expression of the chimeric gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid fragment encoding myo-inositol 1-phosphate synthase, useful for producing plants with decreased raffinose, stachyose, and phytic acid and increased sucrose, leading to valuable and useful soybean

The nucleic acid is useful for altering raffinose saccharide, sucrose, phytic acid and inorganic phosphate content of soybean seeds thus leading to valuable and useful soybean products, since the presence of high concentration of raffinose oligosaccharides in soy plants (and other legumes) can lead to flatulence when consumed by humans. The present sequence represents a wild-type myo-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ş
                                                                                                                                                                                                                      This is the amino acid sequence of soybean myo-inositol 1-phosphate CC synthase (MI 1-P3) deduced from the coding region of an isolated cDNA CC clone (see AAV62440). MI 1-PS is involved in glucose metabolism to phytic acid, raffinose and stachyose. A mutant MI 1-PS (see AAW79741) has been CC identified in soybean line LR33, a mutagenised line of low raffinose saccharide phenotype. Sequencing revealed a single base change mutation in the LR33 gene sequence that resulted in a K396N substitution in the mutant protein. The mutation results in a seed phenotype of very low raffinose saccharide sugars, very high sucrose and low phytic acid. The mutated nucleic acid is used to alter the raffinose saccharide, sucrose, phytic acid and inorganic phosphate content of soybean seeds, leading to useful soybean products, e.g. a seed phytic acid content of less than 17 cg/g, a seed content of raffinose and stachyose combined of less than 17 cg/g, and a seed sucrose content greater than 200 ug/g. (Updated on 14.5 ug/g, and a seed sucrose content greater than 200 ug/g. (Updated on C7 17-OCT-2003 to standardise OS field)

Example 8; SEQ ID NO 10; 48pp; English.

The invention relates to a nucleic acid fragment encoding a soybean myo-inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate synthase having a decreased capacity for the synthesis of myo-inositol 1-phosphate. The invention also relates to a chimeric gene operably linked to suitable regulatory sequences, where expression of the chimeric gene encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant comprising the chimeric gene, a method of making the soybean plant, a seed of the soybean plant, a soy processing of soybean seeds, a method of making or producing a soy processing of soybean seeds, a method of making or producing a soy processing of soybean seeds, a method of making or producing a soy protein product and a method of using a soybean plant homozygous for at least one gene encoding a mutant myo-inositol 1-phosphate synthase having

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             decreased capacity for the synthesis of myo-inositol 1-phosphate. The nucleic acid fragment and methods are useful for producing plants with decreased raffinose, stachyose and phytic acid content and increased sucrose and inorganic phosphate content, leading to valuable and useful soybean products. This sequence represents a mutant soybean myo-inositol 1-phosphate synthase polypeptide of the invention.
                                                                                         New nucleic acid fragment encoding myo-inositol 1-phosphate synthase, useful for producing plants with decreased raffinose, stachyose, and phytic acid and increased sucrose, leading to valuable and useful soybean
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ADQ14491 standard;
